User Story:

The EventForce Management System is an end-to-end CRM solution built on Salesforce to centralize, streamline, and automate event planning operations across their entire lifecycle. To eliminate the inefficiencies of fragmented manual workflows, the system establishes a structured data model using custom objects—including Events, Clients, Vendors, Venues, and Feedback—connected through defined Salesforce relationships to maintain a single source of truth. Advanced business logic implemented via Apex Classes and Triggers enforces real-time validation to prevent venue double-bookings and dynamically updates venue availability status. Automated record-triggered and scheduled Flows handle process updates and timely event reminders, while a dedicated multi-step Approval Process standardizes event cancellation requests to ensure proper authorization and asset release. Delivered through a customized Lightning App alongside real-time Reports and Dashboards, EventForce empowers event teams, venue managers, and vendor coordinators with 360-degree visibility into schedules, vendor performance, and key operational metrics—ultimately driving operational efficiency, data accuracy, seamless collaboration, and an enhanced client experience.

1. INTRODUCTION

1.1 Project Overview:

The **EventForce Management System** is a Salesforce-based CRM solution built to centralize and automate event planning operations across the entire project lifecycle. By replacing disjointed manual processes with a relational data model spanning Events, Clients, Vendors, Venues, and Feedback, the platform maintains data integrity and establishes a single source of truth.

To guarantee operational accuracy, custom Apex Classes and Triggers perform real-time validation to eliminate venue double-booking conflicts and automatically update facility availability. Concurrently, automated record-triggered Flows deliver timely event reminders, while a structured multi-step Approval Process standardizes cancellation requests to ensure proper managerial oversight and immediate resource release.

Delivered through a custom Lightning App alongside real-time Reports and Dashboards, EventForce provides coordinators, venue managers, and vendor partners with 360-degree visibility into schedules,

performance, and operational metrics. Ultimately, this initiative drives measurable improvements in booking efficiency, data accuracy, cross-team collaboration, and client satisfaction.

1.2 Purpose:

The **EventForce Management System** serves as a centralized, Salesforce-based CRM platform designed to streamline, automate, and govern end-to-end event planning operations. The system is engineered to:

- **Centralize Core Operational Data:** Maintain a single source of truth by unifying Client, Event, Venue, Vendor, and Feedback records within a structured data model.
- **Streamline Booking Lifecycle:** Simplify and accelerate client reservations, event scheduling, and venue allocation through standardized workflows.
- **Eliminate Scheduling Conflicts:** Enforce strict venue availability rules using Apex logic to dynamically update booking statuses and prevent double bookings.
- **Automate Key Workflows:** Trigger automated reminders for upcoming events and route cancellation requests through a multi-step approval process.
- **Enhance Stakeholder Collaboration:** Facilitate seamless communication and operational alignment across clients, event coordinators, venue managers, and vendor teams.
- **Deliver Real-Time Analytics:** Empower leadership with customizable Reports and Dashboards to track operational KPIs, monitor vendor activities, and optimize decision-making.
- **Maximize Efficiency & Client Experience:** Eliminate repetitive manual tasks, elevate data integrity, and provide a frictionless service experience for every client.

2.2 Empathy Map Canvas

User Persona: Event Coordinator

Role: Event Coordinator

Primary Responsibility: Manage event bookings, client requirements, venue reservations, vendor coordination, reminders, and event status updates.

- **Think & Feel:** Wants to manage events smoothly, avoid booking conflicts, and provide a reliable experience to clients.
- **Hear:** Receives requirements and updates from clients, vendors, venue managers, and event administrators.
- **See:** Event details, client information, venue availability, vendor assignments, cancellations, and feedback.
- **Say & Do:** Coordinates with stakeholders, updates event records, manages bookings, follows up on requirements, and monitors event progress.
- **Pain:** Manual coordination, fragmented information, venue double-booking risks, and difficulty tracking multiple event activities.

- **Gain:** Centralized event information, automated reminders and processes, accurate venue availability, better coordination, and improved operational visibility.

2.3 Brainstorming & Idea Prioritization

Ideas Considered

Idea	Approach	Key Limitation
------	----------	----------------

Manual Registers	Maintain event, client, venue, and vendor details manually	Time-consuming and difficult to maintain
Spreadsheet Tracking	Track bookings and event information using spreadsheets	Limited automation and real-time coordination
Standalone Portal	Develop a dedicated portal for event management	Higher development and maintenance effort
Salesforce CRM	Centralize event operations on a Salesforce platform	Requires proper configuration and implementation

Final Selection

Salesforce CRM selected due to:

- **Automation:** Automates reminders, approvals, status updates, and business processes.
- **Scalability:** Supports expanding event operations, users, records, and business requirements.

- **Real-Time Visibility:** Provides centralized data, reports, and dashboards for operational monitoring.

Decision: Salesforce CRM provides the best fit for creating a centralized, automated, and scalable EventForce Management System.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stage	Customer Journey Stage	What Happens
1	Event Enquiry & Client Registration	Client requirements and contact details are captured in Salesforce.
2	Event Planning & Booking	Event details such as event type, date, budget, and status are created and managed.
3	Venue Selection & Reservation	Suitable venues are identified, availability is checked, and reservations are managed while preventing double bookings.
4	Vendor Coordination	Vendors and required services are assigned to events and their availability/status is coordinated.
5	Event Confirmation & Communication	Confirmed events trigger automated communication, including reminders sent to clients before the event.
6	Event Execution & Monitoring	Event progress and operational information are monitored through Salesforce records, reports, and dashboards.

7	Cancellation & Approval	Cancellation requests are submitted through the approval process, with appropriate status updates and notifications.
8	Feedback & Closure	Client feedback is captured after the event, and completed events are updated for operational tracking and future analysis.

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Event management
FR-2	Client management
FR-3	Venue management
FR-4	Vendor management
FR-5	Event–vendor assignment
FR-6	Venue availability & double-booking prevention

FR-7	Automated event reminders
FR-8	Event cancellation approval
FR-9	Feedback management
FR-10	Reports & dashboards
FR-11	Event status automation
FR-12	Data migration through Data Import Wizard

3.2 Non-Functional Requirements

NFR	Description
Usability	Lightning App for easy event management and navigation
Security	Profile-, role-, and permission-based access control
Reliability	Accurate automation, approvals, and venue booking validation
Performance	Efficient processing of event and operational data
Availability	Cloud-based Salesforce access for authorized users
Scalability	Supports growing events, clients, vendors, venues, and users
Maintainability	Flows, Apex, validation rules, and security can be monitored and updated

Data Integrity	Validation and controlled data migration to maintain accurate records
----------------	---

3.3 Data Flow Diagram

Flow:

3.4 Technology Stack

Layer	Technology
Platform	Salesforce CRM / Developer Edition
UI	Salesforce Lightning App

Database	Salesforce Custom Objects
Business Logic	Salesforce Flows, Formula Fields, Validation Rules
Approval	Salesforce Approval Process
Automation	Record-Triggered Flows, Apex Triggers

Processing & Security

Security: Profiles, Roles, Permission Sets, Sharing Rules, OWD

Processing	Batch Apex, Scheduled Apex
Security	Profiles, Roles, Permission Sets, Sharing Rules, OWD
Reporting	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The EventForce Management System provides a strong fit between identified event-management problems and Salesforce capabilities. The solution combines custom data structures, automation, Apex business logic, approval processes, security controls, and reporting to address the operational challenges of event planning and coordination.

Problem	Solution – EventForce Salesforce System	Fit / Benefit
Client, event, venue, and vendor information is difficult to manage centrally	Custom Salesforce objects for Event, Client, Venue, Vendor, Feedback, and EventVendor	Centralized and structured event data

Event booking requires multiple manual activities	Salesforce Flows and automated processes	Reduces manual effort and improves process efficiency
Risk of venue double booking	Apex Trigger and VenueStatusHelper	Validates venue availability and prevents double bookings
Vendor coordination is difficult to track	EventVendor junction object and Vendor records	Supports event–vendor assignment and coordination
Clients may not receive timely event reminders	3-Day Reminder Flow	Automates reminder communication before confirmed events

Problem	Solution – EventForce Salesforce System	Fit / Benefit
Cancellation requests require controlled processing	Event_Cancellation_Process Approval Process	Provides structured approval and status updates
Client feedback needs to be connected with events	Feedback object with Event and Client relationships	Enables organized feedback management
Operational information is difficult to monitor	Reports and EventForce Operations Dashboard	Provides better visibility for monitoring and decisions
Different users require different levels of access	Profiles, Roles, Permission Sets, OWD, and Sharing Rules	Provides controlled and secure data access

4.2 Proposed Solution

Functional Requirements Overview

Parameter	Description
Problem	Manual and fragmented event management
Solution	Salesforce CRM
Innovation	Automated event reminders, venue validation, and cancellation approvals
Impact	Faster event coordination and improved operational visibility
Business Model	Centralized event planning and management
Scalability	Supports growing events, clients, vendors, venues, and users

4.3 Solution Architecture

Components:

- Event Object
- Client Object
- Vendor Object
- Venue Object
- EventVendor Junction Object
- Feedback Object
- Validation Rules
- Formula Fields
- Flows
- Approval Process
- Apex Triggers
- Apex Classes
- Batch Apex
- Scheduled Apex
- Profiles & Roles
- Permission Sets & Sharing Rules
- Data Import Wizard
- Lightning App
- Reports
- Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution

- Velocity calculation used for estimation

Phase 1: Requirement Analysis & Planning

Build an EventForce Management System in Salesforce to help event planners manage client bookings, vendor coordination, venue reservations, and feedback collection — all within a single CRM platform. The system automates key processes such as event scheduling, cancellation approvals, and client reminders, while providing real-time visibility through reports and dashboards.

Functional Scope:

- Custom objects (Event, Client, Vendor, Venue, Feedback, and Event Vendor (Junction Object)).
- Relationship modeling: Lookup, Master-Detail, and Many-to-Many (Event ↔ Vendor).
- Automation using Flows for reminders, feedback notifications, and approval updates.
- Validation Rules and Formula Fields to ensure accurate data entry and event budget calculation.
- Approval Processes for event cancellation requests with email alerts to coordinators and clients.
- Profiles, Roles, and Permission Sets to manage user-level access and security.
- Reports and Dashboards for event summary, vendor performance, and upcoming event insights.

Stakeholder Mapping:

- Clients: Request event services, provide feedback, and view event updates.
- Event Coordinators: Manage event scheduling, client communication, and approval workflows.
- Vendors: Handle assigned event services like catering, decor, and logistics.
- Venue Managers: Manage venue availability and reservations.
- Event Administrators: Oversee system operations, security, and data monitoring.

Execution Roadmap:

1. Object & Field Setup – Creation of Event, Client, Vendor, Venue, Feedback, and Event Vendor objects.
2. Automation Flows – Implement record-triggered flows for event reminders and approvals.
3. Validation Rules & Formula Fields – Enforce data accuracy and budget calculations.
4. Profiles, Roles, and Permission Sets – Configure user access and record visibility.
5. Approval Process – Automate event cancellation request workflow with notifications.
6. Apex Classes & Triggers – Update venue availability and prevent double bookings.
7. Reports & Dashboards – Create analytics for upcoming events and performance insights.

Phase 2: Backend Development & Configurations

The Backend & Configuration phase built the core functional engine of the EventForce Management System. Using a combination of Salesforce Flows, Apex logic, and Security configurations, this phase focused on developing the system's automation backbone to manage events, clients, vendors, venues, and feedback efficiently.

Declarative tools such as Record-Triggered Flows, Validation Rules, Formula Fields, and Approval Processes were used extensively to automate booking confirmations, reminders, and cancellation approvals. Meanwhile, Apex Classes and Triggers handled advanced business logic like venue availability updates and preventing double bookings, ensuring operational accuracy and scalability.

The phase also included implementing Profiles, Roles, Permission Sets, and Sharing Rules to define user-level access, maintaining data integrity and security across all modules.

Altogether, this phase transformed the EventForce application from a static structure into a dynamic, automated, and secure CRM system capable of handling real-world event management workflows.

Milestone 1: Salesforce Account

Data Architecture:

Created Custom objects:

1. Event__c

(Fields: Event Name, Event Date, Event Type, Event Status, Event Budget) 2. Client__c

(Fields: Client Name, Email, Phone, Address, Country, City)

3. Vendor__c

(Fields: Vendor Name, Email, Phone, Service Type, Status)

4. Venue__c

(Fields: Venue Name, Address, Location (URL), Capacity, Availability Status) 5. Feedback__c

(Fields: Feedback ID (Auto Number), Rating, Comments)

6. EventVendor__c (Junction Object)

(Links Event ↔ Vendor for Many-to-Many relationship)

Relationships:

Relationship	Type
Event → Client	Lookup
Event → Venue	Lookup
Feedback → Event	Lookup
Feedback → Client	Lookup
EventVendor → Event	Master-Detail
EventVendor → Vendor	Master-Detail

Milestone 2: Object

What is an object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. It consists of fields (columns) and records (rows).

In This Application We Use 5 Custom Objects:

1. Event
2. Client
3. Vendor
4. Venue
5. Feedback

Activity 1: Create Event Object

To create a custom object, follow these steps:

1. From setup click on object manager.
2. Click create, select custom object.
3. Fill in the label as " Event ".
4. Fill in the plural label as " Events ".
5. Record name: "Event Name"

53+ Items, Sorted by Label					Custom Object
					Custom Object from Spreadsheet
LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	
Account	Account	Standard Object			
Activity	Activity	Standard Object			
Activity History	DevopsActivityLog	Standard Object			
Address	Address	Standard Object			
Agent Work	AgentWork	Standard Object			
Alternative Payment Method	AlternativePaymentMethod	Standard Object			

6. Select the data type as "Text".

☒ Allow Search

Object Creation Options (Available only when custom object is first created)

☒ Add Notes and Attachments related list to default page layout

☐ Launch New Custom Tab Wizard after saving this custom object

Save | Save & New | Cancel

7. In the Optional Features section, select Allow Reports, Allow Activities and Track Field History.

8. In the Deployment Status section, ensure Deployed is selected.

9. In the Search Status section, select Allow Search.

10. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout.

11. Leave everything else as is, and click Save.

Activity 2: Create Client ,Vendor,Venue,Feedback Object

1. For Client, Vendor, and Venue Objects:

- Go to **Setup** (gear icon) > **Object Manager**.
- Click **Create** > **Custom Object**.
- Enter the respective **Label** and **Plural Label**.
- Set **Record Name** to "[Object] Name" with a **Text** data type.
- Check **Allow Reports** and **Allow Search**.
- Select **Add Notes and Attachments related list to default page layout**.
- Click **Save**.

2. For the Feedback Object:

- Go to **Setup** > **Object Manager** > **Create** > **Custom Object**.
- Set **Label** to "Feedback" and **Plural Label** to "Feedbacks".
- Set **Record Name** to "Feedback" with an **Auto Number** data type (Display Format: F-{0000}, Starting Number: 0).
- Check **Allow Reports** and **Allow Search**.
- Select **Add Notes and Attachments related list to default page layout**.
- Click **Save**.

Milestone 3 - Tabs

- **Tabs in Salesforce:** Help users view information at a glance and display data of objects and other web content in the application.
- **Standard Object Tabs:** Display data related to standard objects.
- **Custom Object Tabs:** Display data related to custom objects and look and function just like standard tabs.

Activity 1: Creating a Custom Tab(Event)

Now create a custom tab.

1. Click on the Home tab, enter Tabs in Quick Find and select Tabs.
2. Under custom object tabs, click New
3. For Object, select Event
4. For Tab Style, select any icon.
5. Leave all defaults as is. Click Next, Next, and Save.

3. For Object, select Event
4. For Tab Style, select any icon.
5. Leave all defaults as is. Click Next, Next, and Save

Activity 2: Creating a custom tab(Client, Vendor, Venue, Feedback)

- **Step 1:** Navigate to the **Home** tab in Salesforce Setup.
- **Step 2:** Type **Tabs** in the Quick Find box and select **Tabs**.
- **Step 3:** Under **Custom Object Tabs**, click **New**.
- **Step 4:** Select the respective object (**Client**, **Vendor**, **Venue**, or **Feedback**).
- **Step 5:** Choose your desired **Tab Style** icon.
- **Step 6:** Leave all default settings as they are, then click **Next**, **Next**, and **Save**.

Milestone 4 – Fields and Relationship

- **What are fields:** Fields in Salesforce represent what columns represent in relational databases, storing data values required for a particular object in a record.

- **Standard fields:** Four standard fields exist in every custom object: Created By, Last Modified By, Owner, and the creation timestamp. These cannot be deleted, edited, or removed.
- **Custom fields:** Fields added by administrators or developers to meet specific business requirements, which may or may not be required.

Activity 1: Creation of fields for the Event object:

- **Step 1:** Click the gear icon and select **Setup**. This launches Setup in a new tab.
- **Step 2:** Click the **Object Manager** tab next to Home.
- **Step 3:** Select **Event**.
- **Step 4:** Select **Fields & Relationships** from the left navigation, and click **New**.
- **Step 5:** Review the existing fields listed under Fields & Relationships (note that these are the standard system fields).
- **Step 6:** Choose **Picklist** as the data type and click **Next**.
- **Step 7:** For Field Label, enter **Event Type**.
- **Step 8:** Select **Enter values, with each value separated by a new line** and enter the following values:
 - Wedding
 - Corporate
 - Birthday
 - Anniversary
 - Festival
 - Concert
 - Other
- **Step 9:** Click **Next**, **Next**, and **Save**.

The screenshot shows the Salesforce Setup interface for the 'Event' object. The left sidebar contains a navigation menu with the following items: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, and Search Layouts. The 'Details' section is currently selected. The main content area displays the configuration for the 'Event' object, including the following fields and settings:

- Description:** (Empty text field)
- API Name:** Event_c
- Custom:** ☒
- Singular Label:** Event
- Plural Label:** Events
- Enable Reports:** ☒
- Track Activities:** ☒
- Track Field History:** ☒
- Deployment Status:** Deployed
- Help Settings:** Standard salesforce.com Help Window

At the top right of the main content area, there are 'Edit' and 'Delete' buttons.

Fields & Relationships
11 Items, Sorted by Field Label

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Client	Client__c	Lookup(Client)		✓
Created By	CreatedById	Lookup(User)		
Event Budget	Event_Budget__c	Formula (Currency)		
Event Date	Event_Date__c	Date		
Event Name	Name	Text(80)		✓
Event object	Event_object__c	Formula (Currency)		
Event Status	Event_Status__c	Picklist		
Event Type	Event__c	Picklist		

Field Types:

- ☐ Currency
- ☐ Date
- ☐ Date/Time
- ☐ Email
- ☐ Geolocation
- ☐ Number
- ☐ Percent
- ☐ Phone
- ☒ Picklist
- ☐ Picklist (Multi-Select)
- ☐ Text
- ☐ Text Area
- ☐ Text Area (Long)
- ☐ Text Area (Rich)
- ☐ Text (Encrypted)
- ☐ Time
- ☐ URL

Now let's create the other fields following the above Activity1 steps ,we must choose the data types of the fields carefully.

Step 1: Select **Date** as the Data Type and click Next. For Field Label, enter **Event Date**, then click Next, Next, and **Save & New**.

Step 2: Select **Picklist** as the Data Type and click Next. For Field Label, enter **Event Status**, select enter values separated by a new line, and enter the following values:

- Planned
- Confirmed
- Completed
- Pending Cancellation
- Canceled
- Rejected

Step 3 (Formula Field): Select **Formula** as the Data Type and click Next.

Step 4: Enter the field label as **Event Budget**.

Step 5: Select **Currency** as the formula return type and click Next.

Step 6: Create and insert the formula:

```
CASE(  
  TEXT(Event_Type__c),  
  "Wedding", 50000,  
  "Corporate", 30000,  
  "Birthday", 10000,  
  "Anniversary", 20000,  
  "Festival", 60000,  
  "Concert", 40000,  
  "Other", 15000,  
  0  
)
```

Step 7: Check the syntax, then click Next, Next, and **Save**

The screenshot displays the Salesforce Setup interface, specifically the 'Event Custom Field' definition page for 'Event Budget'. The page is titled 'Event Custom Field' and 'Event Budget'. It shows the 'Custom Field Definition Detail' section with the following information:

Field Information	Field Label	Event Budget	Object Name	Event
Field Name	Event_Budget			
API Name	Event_Budget__c			
Description				
Help Text				
Data Owner				
Field Usage				
Data Sensitivity Level				
Compliance Categorization				
Created By	Nazila Farveeq	9/29/2026, 6:20 AM	Modified By	Nazila Farveeq
		9/29/2026, 6:20 AM		

The 'Formula Options' section shows the Data Type as 'Formula' and Decimal Places as '2'. The formula is displayed as:

```
CASE(  
  TEXT(Event_Type__c),  
  "Wedding", 50000,  
  "Corporate", 30000,  
  "Birthday", 10000,  
  "Anniversary", 20000,  
  "Festival", 60000,  
  "Concert", 40000,  
  "Other", 15000,  
  0  
)
```

Activity 2: Creation of fields for the Client object:

Step 1: Select the **Email** as the Data Type, then click Next. For Field Label **Email**, click Next, Next, then **Save & New**.

Step 2: Select the **Phone** as the Data Type, then click Next. For Field Label **Phone**, click Next, Next, then **Save**.

Step 3: Select the **Text Area** as the Data Type, then click Next. For Field Label **Address**, click Next, Next, then **Save**.

Step 4: Select the **Picklist** as the Data Type, then click Next. For Field Label **Country**, select **Enter values, with each value separated by a new line** and enter the following values:

- India
- Philippines
- Saudi Arabia
- USA
- Switzerland
- Thailand
- Maldives
- Dubai
- Sri Lanka
- Bangkok
- Singapore
- Myanmar
- France
- Nepal

Step 5: Click **Save**.

Step 6: Select the **Picklist** as the Data Type, then click Next. For Field Label **City**, select **Enter values, with each value separated by a new line** and enter the following values:

- Hyderabad
- Mumbai
- Delhi
- Bangalore
- Chennai
- Alaminos
- Angeles City
- Palayan
- Quezon City
- San Juan
- Riyadh
- Jeddah
- Tayma
- Dammam
- Medina
- New York
- Los Angeles
- Chicago
- Houston
- Columbus
- Geneva
- Basel
- Lausanne
- Bern
- Lucerne

Step 7: Click **Save**.

Activity 3: Creation of fields for the Vendor object:

- **Step 1:** Select the **Multi-Select Picklist** as the Data Type, then click Next. For Field Label **Service Type**, select **Enter values, with each value separated by a new line** and enter the following values:
 - Catering
 - Decor
 - Photography
 - Videography
 - Lighting
 - Stage Setup
 - Makeup Artist
 - DJ/Music
 - Transportation
 - Hosting/Anchor
- **Step 2:** Select the **Email** as the Data Type, then click Next. For Field Label **Email**, click Next, Next, then **Save & New**.
- **Step 3:** Select the **Phone** as the Data Type, then click Next. For Field Label **Phone**, click Next, Next, then **Save**.
- **Step 4:** Select the **Picklist** as the Data Type, then click Next. For Field Label **Status**, select **Enter values, with each value separated by a new line** and enter the following values:
 - Available
 - Booked
 - Cancelled

32°C

ENG IN 12:55 PM 10/1/2026

Activity 4: Creation of fields for the Venue object:

- Select the **Text Area** data type and click Next. For the Field Label, enter **Address**, then click Next, Next, and Save.

- Select the **URL** data type and click Next. For the Field Label, enter **Location**, then click Next, Next, and Save.
- Select the **Number** data type and click Next. For the Field Label, enter **Capacity**, then click Next, Next, and Save.
- Select the **Picklist** data type and click Next. For the Field Label, enter **Availability Status**, select enter values separated by a new line, and enter the following values:
 - Available
 - Reserved
 - Not Available

Activity 5: Creation of fields for the Feedback object:

- Select the **Picklist** data type and click Next. For the Field Label **Rating**, select enter values separated by a new line and enter the values: **1, 2, 3, 4, 5**.
- Select the **Long Text Area** data type and click Next. For the Field Label **Comments**, click Next, Next, and Save.

Relationships:

Activity 1: Creation lookup relationship

- **Event Relationships:**
 - Create a Lookup relationship on the Event object linking to Venue.
 - Create a Lookup relationship on the Event object linking to Client.
- **EventVendor Junction Object:**
 - Create a junction object named `EventVendor__c`.
 - Establish Master-Detail relationships to both Event and Vendor for many-to-many associations.
- **Feedback Relationships:**
 - Create a Lookup relationship on the Feedback object linking to Event.
 - Create a Lookup relationship on the Feedback object linking to Client.
- **Feedback Lookup Filter:**
 - Go to the Feedback object's Event field settings and enable the filter.
 - Set the criteria where the Event's client field equals the Feedback record's client field.
 - Save changes.

Milestone 5 - Validation Rules

Validation rules are applied when a user tries to save a record and are used to check if the data meets

specified criteria. If the criteria are not met, the validation rule triggers an error message and prevents the user from saving the record until the issues are resolved.

Activity 1: Create Validation Rules on Client__c :

1. Go to the setup page → click on object manager → type object name(Client) in quick find box, click on the Client object

2. Click on the validation rule → click New.

3. Enter the Rule name as “ Email_Valid_Address”.

4. Select Active

5. Insert the Error Condition Formula as : -

`NOT(REGEX(Email__c, "[a-zA-Z0-9._]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,}$" ))`

6. Set the error message to "Please Enter Valid Email Address", choose the **Email** field as the error location, and click **Save**

The screenshot shows the Salesforce Setup page for the 'Client' object. The 'Validation Rule Detail' section is visible, showing the rule name 'Email_Valid_Address', the error condition formula 'NOT(REGEX(Email__c, "[a-zA-Z0-9._]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,}\$"))', the error message 'Please Enter Valid Email Address', and the error location 'Email'. The rule is set to 'Active'.

Validation Rule Detail	
Rule Name	Email_Valid_Address
Error Condition Formula	NOT(REGEX(Email__c, "[a-zA-Z0-9._]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,}\$"))
Error Message	Please Enter Valid Email Address
Error Location	Email
Description

Modified By	Nazila Farveen, 9/28/2028, 8:04 AM

Milestone 6: APPROVAL PROCESS

Activity 1: Create an Approval Process for Event Cancellation **Approval Note:** Before Implementing Approval Process first Complete Profiles, Roles and Users Milestones.

1.Create Classic Email Template

1. Go to Setup (gear icon on top-right)
2. In the Quick Find box, type: Email Templates
3. Click on Classic Email Templates
4. Click "New Template"
5. You'll now choose the type of email template you want to create.

Choose the type:

- Text – Plain text (no formatting)
- Click Next

6.Email Template Information:

Folder	Public or private folder (use "Unfiled Public Email Templates" for now)
Email Template Name	Event Cancellation Request Notification
Template Unique Name	Auto-filled, or change it (no spaces)
Encoding	Leave default (UTF-8)
Subject	Approval Request: Cancel Event {!Event__c.Name}

Email Body	Hello! An approval request has been submitted to cancel the event: - Event Name: {!Event__c.Name} - Event Date: {!Event__c.Event_Date__c} Thank you, EventForce Management System
------------	--

- **Email to Client After Cancellation:** Notifies clients upon cancellation approval with the subject "Event Cancellation Notice – {!Event__c.Name}".
- **Approval Notification to Event Owner:** Alerts the event owner when a cancellation request is approved with the subject "Event Cancellation Approved: {!Event__c.Name}" and confirms the status update to Canceled.
- **Rejection Notification to Event Owner:** Informs the owner if a cancellation is rejected with the

subject "Event Cancellation Rejected: {!Event__c.Name}" noting that the status has reverted to Confirmed.

5. Create the Approval Process

1. **Open Approval Processes:** Go to Setup, search for and open **Approval Processes**, select the **Event** object, and click **Create New Approval Process** using the Standard Setup Wizard.
2. **Basic Settings:** Name the process `Event_Cancellation_Process` and click Next.
3. **Set Entry Criteria:** Choose "Criteria are met", set **Event Status** to equal Pending Cancellation, and click Next.
4. **Select Approver:** Set the approver to automatically assign to the manager of the record submitter, and click Next.
5. **Select Email Template:** Choose the Event Cancellation Request Notification template, and click Next.
6. **Choose Layout Fields:** Select the key fields to display on the approval page (such as Event Name, Owner, Client, and Event Status) and click Next.
7. **Specify Submitters:** Set **Event Owner** as the initial submitter and click Save.
8. **Configure Initial Submission Actions:** Add an Email Alert notifying the Event Coordinator role using the cancellation request template.
9. **Configure Final Approval Actions:**
 - Add a Field Update to change **Event Status** to Canceled.
 - Add an Email Alert to notify the event owner of approval.
10. **Configure Final Rejection Actions:**
 - Add an Email Alert to notify the event owner of rejection.
 - Add a Field Update to change **Event Status** to Rejected.
11. **Add Approval Step:** Create a new step named Manager Review, select "All records should enter this step", assign the approver, and save.
12. **Activate:** Go to the approval process detail page and click **Activate**.

Milestone 7 - Flows

In Salesforce, a flow is a powerful tool that allows you to automate business processes, collect and update data, and guide users through a series of screens or steps. Flows are built using a visual interface and can be created without any coding knowledge.

Activity 1 : Create Flow to Send 3-Day Reminder Email to Client Scenario:

When an Event is created/updated with Status = Confirmed and a valid Client with an email address, the system should automatically send a reminder email to the Client 3 days before the Event Date.

Flow Label	Process Type	Active	Template	Package State	Package...	Last Modified By	Last Modified Date
Add Case Comment	Autolaunched Flow	☒	☐	Managed-Installed			
Add or Modify Service Appointment Attendees	Salesforce Scheduler Flow	☒	☐	Managed-Installed			
Approvals Workflow: Evaluate Approval Requests	Screen Flow	☒	☒	Managed-Installed			
Approvals Workflow: Process Approval Submission	Screen Flow	☒	☐	Managed-Installed			
Authentication Provider User Registration	Identity User Registration Flow	☐	☒	Managed-Installed			

- **Step 1:** Go to Setup, type "Flow" in the Quick Find box, click on **Flows**, and select **New Flow**.
- **Step 2:** Select **Record-Triggered Flow** and click **Create**.
- **Step 3:** Under Object, select **Event**.
- **Step 4:** Select **A record is created or updated**.
- **Step 5:** Enter condition:
 1. **Field:** Event Status
 2. **Operator:** Equals
 3. **Value:** Confirmed
- **Step 6:** Select **Optimize the flow for:** "Actions and Related Records" and click **Done**.
- **Step 7:** Click on the Start button, and click **Add Schedule Path**.
- **Step 8:** Enter Path name as **3_Days_Before** (API name automatically populates).
- **Step 9:** Select Time Source as **Event__c: Event Date**.
- **Step 10:** Enter Offset Number: **3**.
- **Step 11:** Select Offset Options: **Days Before**, and click the 'x' icon.
- **Step 12:** Select Toolbox from the top left corner, and click **New Resource**.
- **Step 13:** Select **Text Template**.
- **Step 14:** Enter API Name: **Subject**.
 1. In the Body, enter: Reminder: Your Event {!\$Record.Name} is in 3 days
 2. Select **View as Plain Text**.
 3. Click **Done**.
- **Create another Resource:**
 1. Select **Text Template**.
 2. Enter API Name: **Body**.
 3. In the Body, enter:

Hello {!\$Record.Client__r.Name},

This is a reminder that your event "{!\$Record.Name}" will take place on
{!\$Record.Event_Date__c}.

Venue: {!\$Record.Venue__r.Name}

Type: {!\$Record.Event_Type__c}

We look forward to seeing you!

- EventForce Team

3. Select **View as Plain Text**.

4. Click **Done**.

- **Step 1 (Action):** Under the 3 Days Before path, click the + symbol and select **Action** from the dropdown list.
- **Step 2 (Action):** After clicking Action, select **Email Action**.
- **Step 3 (Action):** Search for **Send Email**, and click on it.
- **Step 4 (Action):** Enter the label name as **Alert_Client_3Day_Reminder**.
- **Step 5** Select the Recipient Address List as Client Email.
- **Step 6** Select the CC Recipient Address List : Event Owner
- **Step 7:** In **Configure Email Content**, select **Compose Email Content**.
- **Step 8:** For **Subject**, select the **Subject** Resource.
- **Step 9:** For **Body**, select the **Body** Resource.
- **Step 10:** Click **Save**.
- **Step 11:** Enter the Flow Label as **Client Reminder - 3 Days Before**, then click **Save & Activate**.

Milestone 8 – Apex Classes

Activity1: Scenario: When an Event is created with a Venue, mark Venue Availability = “Reserved”. When event is cancelled, mark “Available”

- **Step 1: Click the Gear Icon and select Developer Console.**

- **Step 2:** Click on **File**, select **New**, and click on **Apex Class**.
- **Step 3:** Give the name as **VenueStatusHelper** and click **OK**.
- **Step 4:** Write your Apex Class Code:

```
public with sharing class VenueStatusHelper {

    public static void updateVenueStatus(List<Event__c> events){

        List<Venue__c> venues = new List<Venue__c>();

        for(Event__c ev : events){

            if(ev.Venue__c != null){

                if(ev.Event_Status__c == 'Confirmed'){

                    venues.add(new Venue__c(Id=ev.Venue__c,
Availability_Status__c='Reserved'));

                } else if(ev.Event_Status__c == 'Canceled'){

                    venues.add(new Venue__c(Id=ev.Venue__c,
Availability_Status__c='Available'));

                }

            }

        }

        if(!venues.isEmpty()) update venues;

    }

}
```

- **Step 5:** Save the class using **CTRL + S**.
- **Step 6:** Create the trigger by clicking on **File**, selecting **New**, and clicking on **Apex Trigger**.
- **Step 7:** Give the name as **EventTrigger13** and select Object: **Event__c**, then click **Submit**.
- **Step 8:** Write your Apex Trigger Code:

```
trigger EventTrigger13 on Event__c (after insert, after update) {

    VenueStatusHelper.updateVenueStatus(Trigger.new);

}
```

}

Milestone 9 – Apex Trigger

Activity1: Scenario:Do not allow two events at the same Venue on the same Date.

Create an Apex Trigger:

- **Step 1:** Click on **File**, select **New**, and click on **Apex Trigger**.
- **Step 2:** Give the name as **PreventDoubleBooking** and select Object: **Event__c**, then click **Submit**.
- **Step 3:** Write your Apex trigger code:

```
trigger PreventDoubleBooking on Event__c (before insert, before update) {

    Set<Id> venueIds = new Set<Id>();

    for(Event__c ev : Trigger.new){

        if(ev.Venue__c != null) venueIds.add(ev.Venue__c);

    }

    Map<Id, List<Event__c>> venueEventMap = new Map<Id, List<Event__c>>();

    for(Event__c e : [SELECT Id, Venue__c, Event_Date__c FROM Event__c WHERE
    Venue__c IN :venueIds]){

        if(!venueEventMap.containsKey(e.Venue__c)){

            venueEventMap.put(e.Venue__c, new List<Event__c>());

        }

        venueEventMap.get(e.Venue__c).add(e);

    }

    for(Event__c ev : Trigger.new){

        if(ev.Venue__c != null && venueEventMap.containsKey(ev.Venue__c)){

            for(Event__c existing : venueEventMap.get(ev.Venue__c)){

                if(existing.Event_Date__c == ev.Event_Date__c && existing.Id != ev.Id){

                    ev.addError('This Venue is already booked on this date.');
```

```

    }
}
}
}
}

```

- Step 4: Save the trigger using CTRL + S.

Milestone 10: Batchable and Schedulable Asynchronous Apex

Step 1: Create Batch Apex Class

- Click the **Gear Icon** and select **Developer Console**.
- Click on **File**, select **New**, and click on **Apex Class**.
- Give the name as **BatchCompleteEvents** and click **OK**.
- Write your Apex Class code:

Source Code:

```

        global class BatchCompleteEvents implements
        Database.Batchable<sObject> {
global Database.QueryLocator start(Database.BatchableContext bc){

    return Database.getQueryLocator(

        'SELECT Id, Event_Date__c, Event_Status__c FROM Event__c WHERE Event_Date__c <
TODAY AND Event_Status__c != \'Completed\'

    );
}

global void execute(Database.BatchableContext bc, List<Event__c> scope){

    for(Event__c ev : scope){

        ev.Event_Status__c = 'Completed';

    }

    update scope;
}

```

```

    }

    global void finish(Database.BatchableContext bc){

        System.debug('Past events marked as Completed');

    }

}

```

- .Save the class using CTRL+S

Step 2: Schedulable class Implementation:

- Click the **Gear Icon** and select **Developer Console**.
- Click on **File**, select **New**, and click on **Apex Class**.
- Give the name as **ScheduleCompleteEvents** and click **OK**.
- Write your Apex Class code:

Source Code:

```

global class ScheduleCompleteEvents implements Schedulable {

    global void execute(SchedulableContext sc){

        Database.executeBatch(new BatchCompleteEvents(), 200);

    }

}

```

- Save the class using CTRL + S.

Step 3: Schedule Batch Apex from Salesforce Setup

- **Step 1: Go to Setup**
 - Click the gear icon → **Setup**.
- **Step 2: Search for Apex Classes**
 - In the Quick Find box, type **Apex Classes**.
 - Click **Apex Classes**.
- **Step 3: Schedule Apex**
 - On the top, click the **Schedule Apex** button.
- **Step 4: Enter Job Details**
 - **Job Name:** Daily Event Completion

- **Apex Class:** Select **ScheduleCompleteEvents** (the schedulable class you created).
- **Step 5: Set Schedule Time**
 - **Frequency:** Weekly or Monthly → Choose **Weekly**.
 - **Days:** Select **All Days**.
 - **Preferred Start Time:** Select **08:00 PM**.
- **Step 6: Save**
 - Click **Save** → Your job is now scheduled.

Phase 3: UI/UX Development & Customization

- **UI/UX Purpose:** Focuses on creating a simple, user-friendly interface for the EventForce Management System.
- **Lightning App Integration:** Includes the creation of a custom Lightning App in Salesforce to organize and access all modules—such as Events, Clients, Vendors, Venues, and Feedback—from a single workspace.
- **Analytics & Visualization:** Reports and dashboards were developed to visualize event schedules, vendor performance, and client feedback.

- **Key Operational Reports:** Reports like "Upcoming Events by Month" are used for analytical tracking, while the "EventForce Operations Dashboard" provides a clear visual summary of key business metrics.
- **Responsive Experience:** Ensures a responsive and data-driven user experience, allowing users to manage and monitor event operations efficiently through Salesforce's Lightning interface.

Milestone 11 - The Lightning App

What is an App ?

Apps in Salesforce are a group of tabs that help the application function by working together as a unit. It has a name, a logo, and a particular set of tabs. The simplest app usually has just two tabs.

1. **Open App Manager:** From Setup, enter "App Manager" in the Quick Find box and select **App Manager**.
2. **Create New App:** Click **New Lightning App**, enter **Event Planner** as the App Name, optionally upload an image, and click **Next**.
3. **App Options & Utility Items:** Leave the default selections under App Options and Utility Items, clicking **Next** on both screens.
4. **Select Navigation Items:** From Available Items, select **Event, Client, Vendor, Venue, Feedback, Reports**, and **Dashboards**, move them to Selected Items, and click **Next**.
5. **Assign Profiles:** From Available Profiles, select **System Administrator**, move it to Selected Profiles, and click **Save & Finish**.
6. **Verify App:** Click the App Launcher, type **Event Planner**, and select the app to verify your changes.

Milestone 12: Reports

1. Create a Report Folder

1. Open **Reports** from the App Launcher.
2. Click **New Folder**, enter the label **EventForce Report**, and click **Save**.

2. Share the Report Folder

1. In the Reports tab, go to **All Folders**.
2. Click the dropdown menu next to **EventForce Report** and select **Share**.
3. Share with the roles **Event Coordinator** and **Vendor Manager**, grant **View** access, then click **Share** and **Done**

3. Create "Upcoming Events by Month" Report

1. Go to **Reports** and click **New Report**.
2. Select **All** categories, search for **Events** (or **Events with Client & Venue**), and click **Start Report**.
3. In the outline pane, add the columns: Event Name, Event Date, Event Type, Client, Venue, and Event Budget.
4. Apply the following filters:

- **Show Me:** All Events
- **Event Date:** $\geq$ TODAY (or Next 30 Days)
- **Event Status:** $\neq$ Canceled

5. Under **Group Rows**, select **Event Date** → **Group by Calendar Month**.

6. Under **Summarize**, enable **SUM** for Event Budget.

7. Click **Add Chart** (Column or Line) setting the X-axis to Event Date (Calendar Month) and Y-axis to Row Count or SUM(Event Budget).

8. Click **Save**, name the report **Upcoming Events by Month**, choose the **EventForce Reports** folder, and click **Save & Run**.

Report Builder | Salesforce

Developer Edition

Event Planner

Events Venues Clients Vendors Feedbacks Event Vendors Reports Dashboards

REPORT

New Events with Venue Report

Events with Venue

Previewing a limited number of records. Run the report to see everything.

Event Date	Event: Event Name	Venue: Venue Name	Event Budget	Event Type	Client
10/13/2028 (1)	Engagement Ceremony	Grand royal	\$15,000.00	Other	Mary Jhonson
	Subtotal		\$15,000.00		
10/30/2028 (1)	Wedding Ceremony	Open Space at Hyderabad	\$50,000.00	Wedding	Sam Smith
	Subtotal		\$50,000.00		
Total (2)			\$65,000.00		

Milestone 13 - Dashboards

- **Step 1:** Click on the **Dashboards** tab from the EventForce Management System application.
- **Step 2:** Click on **New Dashboard**.
- **Step 3:** Give name – **EventForce Operations Dashboard**.
- **Step 4:** Click **Create**.
- **Step 5:** Click on **+ Widget**.
- **Step 6:** Select the **Upcoming Events by Month** Report.
 - **Chart:** Donut Chart
 - **Max Values Displayed:** 6
 - **Subtitle:** Upcoming Events Overview
 - **Widget Theme:** Light
 - Click **Save**.

Phase 4: Data Migration, Testing & Security

- **Data Migration:** Imported records for Events, Clients, Vendors, Venues, and Feedback using the Data Import Wizard after pre-validation checks to prevent duplicates and maintain consistency.

- **User Management:** Created user accounts for the Event Admin, Event Coordinator, Vendor Manager, and Client, assigning specific profiles and roles aligned with their access levels.
- **Security & Access Control:** Set Organization-Wide Defaults (OWD) to Private and configured role hierarchies, permission sets, and sharing rules (such as Event_Sharing_For_Vendors) to ensure secure data visibility.
- **Testing & Quality Assurance:** Validated data accuracy, automation performance, and user permissions to confirm the system is secure, reliable, and fully functional for operations.

Milestone 14 - Profile

A profile in Salesforce is a collection of settings and permissions that define what a user can see and do (such as object permissions, field permissions, tab settings, and login hours). Every user can be assigned only one profile at a time. Steps to Create Custom Profiles

1. Create the "Event Admin" Profile

1. From Setup, type "Profiles" in the Quick Find box and select **Profiles**.
2. Click **New Profile**.
3. Select **System Administrator** as the existing profile to clone.
4. Enter the Profile Name as
5. Event Admin
6. and click **Save**. (*Cloning this base profile grants full administrator access*).

2. Create the "Event Coordinator" Profile

1. From Setup, go to **Profiles** and click **New Profile**.
2. Select **Standard Platform User** as the existing profile to clone.
3. Enter the Profile Name as
4. Event Coordinator
5. and click **Save**.
6. Click **Edit** and set the default custom app to **Event Planner**.
7. Assign custom object permissions:
 - **Event:** Create, Read, Edit, Delete (CRED)
 - **Client:** Read / Edit
 - **Vendor & Venue:** Read

- **Feedback:** Create / Read
8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

3. Create the "Vendor Manager" Profile

1. From Setup, go to **Profiles** and click **New Profile**.
2. Select **Standard Platform User** as the existing profile to clone.
3. Enter the Profile Name as
4. Vendor Manager
5. and click **Save**.
6. Click **Edit** and set the default custom app to **Event Planner**.
7. Assign custom object permissions:
 - **Vendor:** Create, Read, Edit, Delete (CRED)
 - **Event, Venue, Client, & Feedback:** Read Only
8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

4. Create the "Client Profile"

1. From Setup, go to **Profiles** and click **New Profile**.
2. Select **Standard Platform User** as the existing profile to clone.
3. Enter the Profile Name as
4. Client Profile
5. and click **Save**.
6. Click **Edit** and set the default custom app to **Event Planner**.
7. Assign custom object permissions:
 - **Event:** Read Only (for their own events)
 - **Feedback:** Create / Read
 - **Vendor & Venue:** No Access
8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

Milestone 15 - Role

1. **Navigate to Roles:** From the Quick Find box in Setup, search for and select **Roles**, then click **Set Up Roles**.
2. **Create Event Admin Role:** Click **Expand All**, select **Add Role** under CEO, enter the label **Event Admin**, and click **Save**.
3. **Create Event Coordinator Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Event Coordinator**, and click **Save**.
4. **Create Vendor Manager Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Vendor Manager**, and click **Save**.
5. **Create Client Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Client**, and click **Save**.

Milestone 16 - User

A **user** is anyone who logs in to Salesforce. Every user has a unique account that defines their identity and controls what features and records they can access. **Steps to Create Users**

1. Create Admin User

1. From **Setup**, search for **Users** in the Quick Find box and select **Users**.
2. Click **New User**.
3. Fill in required user details (First/Last Name, Alias, Personal Email, Unique Username formatted as text@text.text, and Nickname).
4. Assign settings:
 - **Role:** Event Admin
 - **User License:** Salesforce
 - **Profile:** Event Admin
5. Click **Save**.

2. Create Additional Users

1. Repeat the process to create users for **Event Coordinator**, **Vendor Manager**, and **Client**.
2. Assign settings for each:
 - **Role:** Match the user's role (Event Coordinator, Vendor Manager, or Client)
 - **User License:** Salesforce Platform
 - **Profile:** Match the corresponding profile (Event Coordinator, Vendor Manager, or Client Profile)
3. Click **Save**.

The screenshot shows the Salesforce Setup interface for managing users. The left sidebar contains a navigation menu with options like Users, Analytics Groups, Permission Set Groups, Profiles, Public Groups, Queues, Roles, and User Management Settings. The main content area is titled 'All Users' and includes a search bar, a 'View' dropdown set to 'All Users', and a table of users. The table has columns for Action, Full Name, Alias, Username, Role, Active status, and Profile. Below the table are buttons for 'New User', 'Reset Password(s)', and 'Add Multiple Users'.

Action	Full Name	Alias	Username	Role	Active	Profile

Milestone 17: Permission Set

A **permission set** in Salesforce is a collection of settings and permissions that grant access to specific tools, features, and objects without changing a user's profile.

Steps to Create and Assign a Permission Set:

1. **Open Permission Sets:** From Setup, type **Permission Sets** in the Quick Find box, select **Permission Sets**, and click **New**.
2. **Name the Permission Set:** Enter the Label as **Feedback Manager** and click **Save**.
3. **Configure Object Permissions:** Click **Object Settings**, search for and select the **Feedback** object, and click **Edit**.

4. **Grant Permissions:** Enable **Read, Create, Edit, and Delete (RCED)** permissions for the Feedback object, and click **Save**.
5. **Assign Users:** Click **Manage Assignments**, then click **Add Assignment**.
6. **Complete Assignment:** Select the user with the **Event Coordinator** role, click **Next**, and click **Assign**.

The screenshot shows the Salesforce Setup interface for a Permission Set named 'Feedback Manager'. The left sidebar contains navigation links for 'Users', 'Permission Set Groups', 'Permission Sets', 'Custom Code', and 'Custom Permissions'. The main content area is titled 'Permission Set: Feedback Manager' and includes a search bar and tabs for 'Find Settings...', 'Clone', 'Edit Properties', 'Manage Assignments', and 'View Summary'. Below this is a 'Permission Set Overview' section with a table showing details like API Name, Namespace Prefix, Created By, and Last Modified By. The 'Apps' section lists various settings such as 'Assigned Apps', 'Assigned Connected Apps', 'Object Settings', 'App Permissions', 'Apex Class Access', 'Visualforce Page Access', 'External Data Source Access', and 'Flow Access'.

Milestone 18: Sharing Settings

1. **Configure OWD:** Go to Setup, search for **Sharing Settings**, and click **Edit**. Locate the **Event** object under Organization-Wide Defaults, change both Default Internal Access and Default External Access to **Private**, and click **Save**.
2. **Create Sharing Rule:** Scroll down to the Event sharing rules section, click **New**, and name the rule
3. **Event_Sharing_For_Vendors**
4. Set the rule to share records owned by members of **Roles >> Event Coordinator** with **Roles >> Vendor Manager**, set the access level to **Read Only**, and click **Save**.

Phase 5 : Deployment, Documentation & Maintenance

Deployment :

- **Deployment Scope:** All configurations, customizations, and automations were built and tested within a Salesforce Developer Edition Org.
- **Phase Objective:** To understand how a real-world Salesforce CRM solution is prepared for deployment after complete configuration, testing, and security setup.
- **Why Actual Production Deployment is Omitted:**
 - Developer Edition orgs are standalone environments and not connected to production instances.
 - Real deployments require sandbox environments, change sets, or Salesforce DevOps tools (like GitHub CI/CD pipelines or Salesforce DX), which are used in enterprise-level implementations.
- **Focus of the Phase:** Simulating the deployment process to ensure that all metadata—objects, fields, flows, Apex, and dashboards—are properly structured, version-controlled, and ready for migration when needed.

Maintenance, Monitoring & Troubleshooting :

- **Maintenance Activities:** Ensure that event, client, vendor, and feedback data remain accurate and up to date.
- **Monitoring:** Regular monitoring of flows, Apex jobs, and approval processes helps identify potential issues or failed automations early.
- **Troubleshooting Involves:**

- Resolving user-access errors and permission conflicts.
- Debugging Apex triggers and flow logic.
- Adjusting validation rules or sharing settings as business needs evolve.
- **Real-World Replication:** Although implemented in a Developer Org for academic purposes, these practices replicate real-world CRM management, ensuring long-term stability, scalability, and trust within the Salesforce ecosystem

Functional & Performance Testing

- Validated end-to-end functionality including record management, real-time Apex validation, scheduled Flows, and dashboard analytics. All execution benchmarks passed with low latency.

Strategic Advantages & Limitations

- **Key Advantages:** Centralized data governance, process automation, automated double-booking prevention, multi-step approvals, executive visibility dashboards, and robust enterprise security.
- **Implementation Limitations:** Developed in a Developer Edition org with production migration, CI/CD pipelines, and ongoing maintenance overhead outside immediate scope..

Future Scope & Strategic Roadmap

- **Enterprise Migration:** Deploy via Salesforce DX and CI/CD.
- **Integrations:** Connect payment gateways, calendar systems, and e-signature tools via APIs.
- **Advanced AI:** Add Einstein Analytics for predictive trends and vendor scorecards.
- **Mobile & Portals:** Optimize mobile Lightning components and launch Experience Cloud portals for vendors and clients.

Appendix

- **Appendix A: Custom Data Architecture** — Object structures for Event__c, Client__c, Vendor__c, Venue__c, EventVendor__c (Junction Object), and Feedback__c.
- **Appendix B: Business Logic & Automation** — Declarative Flows, Field-Level Validation Rules, Event Cancellation Approval Processes, Apex Triggers, and Helper Classes.
- **Appendix C: Asynchronous Processing** — Implementation details for Batch Apex and Scheduled Apex jobs handling automated event completions.

- **Appendix D: Security & Access Control Framework** — Configuration logs for Profiles, Role Hierarchies, Permission Sets, Organization-Wide Defaults (OWD), and Sharing Rules.
- **Appendix E: Data Management** — Field mapping templates and execution logs for data loading via the Salesforce Data Import Wizard.
- **Appendix F: User Interface & Analytics** — Custom Lightning App layouts, operational Reports, and real-time Management Dashboards.
- **Appendix G: Quality Assurance & Technical Documentation** — Test execution plans, security matrix tests, automation logs, and functional test result documentation.

Conclusion

The EventForce Management System successfully demonstrates how the Salesforce CRM platform can be architected to centralize, streamline, and automate end-to-end event planning operations. By unifying core entities—Events, Clients, Vendors, Venues, EventVendor assignments, and Feedback—into a cohesive relational database, the project eliminates manual overhead and data silos.

Through a strategic blend of declarative tools and programmatic enhancements, the solution solves complex business problems including double-booking prevention, automated reminder delivery, and governance-backed cancellation handling. Adhering to enterprise best practices for security, testing, and operational reporting, it establishes a scalable blueprint ready for future production deployment.

THANK YOU!!!
